Overview

The 2024 StateRAMP Security Snapshot provides an updated evaluation tool for assessing cloud service providers' security postures. It features revised controls aligned with NIST 800-53 Rev. 5 and utilizes scoring that reflects the control protection values from the MITRE ATT&CK Framework. Key highlights include:

- **No 3PAO Required:** The Security Snapshot does not necessitate a Third-Party Assessment Organization (3PAO), simplifying the evaluation process.
- **Virtual Abridged Audit:** Conducted by the StateRAMP PMO, this audit offers a comprehensive analysis without the need for an on-site visit.
- **Targeted Control Focus:** The Snapshot analyzes the 40 most impactful StateRAMP Ready controls, enabling participants to assess their product maturity in alignment with NIST 800-53 Rev. 5.
